Description

Description : When a product is returned after a successful sales invoice, the returned amount is not deducted from the total revenue in the Daily Report. As a result, the system continues to display the original sales amount instead of the updated revenue after the sales return. This causes an inaccurate revenue calculation and affects the reliability of the Daily report.

Step to Reproduce :
1. Go to Sales Invoice
2. Click the Sales invoice button and select multiple inventories.
3. Create Sales Invoice.
4. Go to Report and select Daily Report , Check the Revenue.
5. Now go to sales invoice and Return Product
6. Check the Daily Report Revenue.

Test Data:
Total Revenue : 6000 taka
Sales Return : 3000 taka
revenue : 3000 taka

Expected Result : The System should deduct product sales return from the total revenue and the system should display correctly total Sales revenue .
Actual result: The System doesn't deduct product sales return from the total sales revenue. It display 3000 Taka.
